18 S

Rotary Printing Press

The HELIOS 18 S which can be supplied as one- or two-colour printing press has already been built in several batches. The one-colour version, equipped with an aniline or a letterpress printing unit, as well as the two-colour machine (the most frequently desired combination is one aniline and one letterpress printing unit) really help in solving printing problems not only in the envelope making industry but also in printing plants where often addresses have to be printed onto the ready-folded envelopes.

If owing to smaller runs the simultaneous printing on the envelope making machine is not economic, a high-capacity printing press which is suitable for economical printing of addresses is always appreciated.

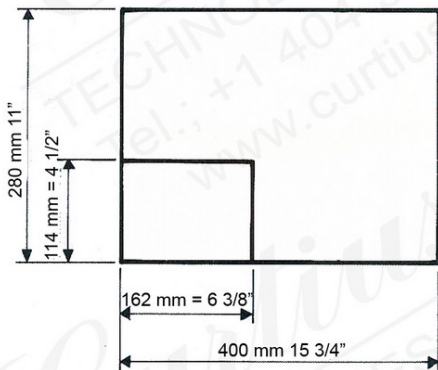

For such printing jobs the HELIOS 18 S has proved to be most suitable, not only for its extremely high output (more than 18 000 impressions per hour), but also for its various quick-change devices. The most remarkable feature is the possibility of quick size changing. The special mounting device for printing plates is a very time-saving equipment, in particular for repeat printing jobs, i. e. the plate can be used more than once.

The machine is a universal printing press, because not only envelopes but also pockets and even square bottom bags can be printed.
