

## Operating Design Parameters

| Process Parameter               | Design Parameter                 |
|---------------------------------|----------------------------------|
| Maximum Sludge Input Moisture:  | 74%                              |
| Throughput:                     | 2,000 pounds wet sludge per hour |
| Minimum Sludge Output Moisture: | 15%                              |
| Energy Efficiency               | 3,500 pound steam per ton sludge |
