

Hydraulic Oil Filter Press – GE330

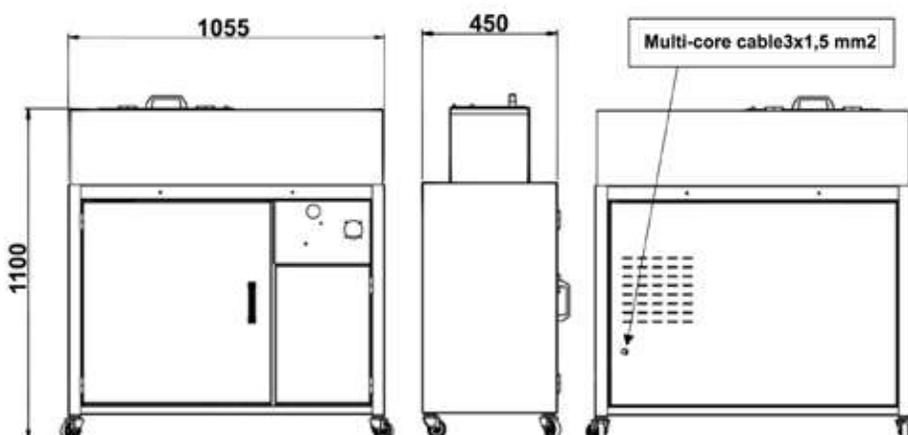

GE330 Horizontal hydraulic oil filters press

It is equipped with a trolley with 4 wheels. The pressing device is based on a cylinder with chromed rod having a stroke of 330 mm.

Advantages:

- The reduction of the filters' volume
- Separate recovery of waste oil and filters
- Facilitation of correct waste disposal
- Autocycle

GE330 180,00 1,200 1

Technical data	GE330	
Voltage AC	V./HZ	230/50
Absorption	A	10
Power	W	1500
Piston Power	kg	15000
Maximum filter size	mm	D.130 L.300
Piston stroke	mm	330
Protection rating		IP43

The horizontal electro-hydraulic crusher GE330 compacts the oil filters of every vehicle and achieves a double result: the total recovery of the residual oil and the reduction of the size of the filters. The oil and compressed filters are automatically collected in freefall in two different containers. The filters' container is equipped with a basket that, besides collecting the filters, allows the dripping of the possible residual oil.
