**Crinder**

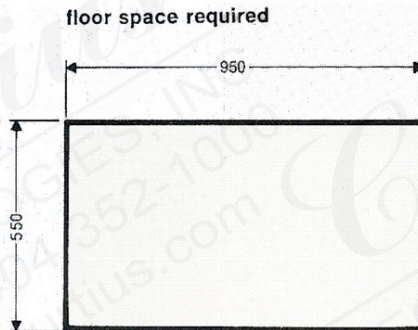

**HELIOS 131 S**

In order to enable the manufacturers of window-faced envelopes to regrind all kinds of window knives on one machine, we have developed the HELIOS 131 S. The different tools supplied with this grinder enable the regrinding of not only the four-piece longitudinal and side knives used on our different machine models but also all one-piece window knives.

Furthermore, this machine is suitable for manufacturing window gummers of the respective diameters and dimensions.

By its ingenious design and its versatility this grinder has become a time-saving and indispensable auxiliary machine for every modern envelope making factory.
