

BELLOWS SEAL FOR OIL RETENTION

- A PERFECT SEAL
- IMPROVED PRODUCTIVITY
- LONGER LIFESPAN OF PUNCHES AND TURRETS
- FDA CERTIFIED MATERIAL

EPMO, expert partner in tooling for the pharmaceutical and cosmetics industries. For over 60 years, thanks to its three major activities, EPMO has been offering its customers solutions for powder compression, tooling and feeding systems for blister packaging, as well as parts for compression presses.

The product - Security

The bellow seal offers an oil retention solution for punches. It is intended to be fixed on the turret with a ring and on the punch part by the seal groove.

The bellow seal is the only oil retention solution that gives a perfect seal between the punch part and powder.

Technical data - Adaptability

Available in B type; only for upper punches.

Tailor made for many turrets.

FDA certified material.

ADVANTAGES

Productivity : High oil retention capacity, decrease tablet press shutdown frequency for cleaning.

Reliability : waterproof, increased lifespan of the punch and turret (avoids jamming of powder in the turret).

Quality : oil containment (in optimum usage, no more black spots on tablets).

Maintenance : the scraper seal becomes obsolete! It is replaced by a fixed or removable ring (without wear).

Easy to use : it fits on the seal groove of the punch instead of cups. Requires no modification of the punches.

Availability : in stock.

Free trial : EPMO provides a bellow seal for test purposes.

Economic : the bellow seal replaces favorably both scraper joint and cup.

Reusable : after cleaning and according to site quality assurance procedures.

Easy assembly : with the removable ring.

THE PRESS PARTS IN SHORT

Parts with an excellent quality, a very competitive price and 50 years experience.

Compatible parts and a first class service in Europe.

Many references available.

An efficient and available technical support.
