CURTIUS TRADING, INC.

FL SMITHE MO lower folding section.

Our upgrade kit consists of a conversion of all bevel gear and shaft with timing belt and 21 pulleys on the main folding section of the machine as well as the conversion of the auxiliary carriage.

This upgrade will give you a more positive transfer of the envelope through the folding section and will

- eliminate any buckling after the scoring,
- reduce maintenance, downtime, noises,
- increase productivity while running lighter base weight.

We have sold that kit on machines in Japan where the market is very demanding and requires a very tight tolerance.

This kit is sold assembled on a base plate predrilled to be bolted where the oil pan used to be and with all guards that make it very simple to install for your technicians.
