

Laparoscopic Bile Duct Exploration

Searching for a cost-efficient and effective solution for the treatment of Common Bile Duct Stones or Cholecystocholedocholithiasis?¹

The flexible video choledochoscopes from KARL STORZ offer you the option of a one-stage treatment procedure compared to ERCP.

¹ Cost-analysis and effectiveness of one-stage laparoscopic versus two-stage endolaparoscopic management of cholecystocholedocholithiasis: a retrospective cohort study (nih.gov)

Laparoscopic Bile Duct Exploration

The flexible video choledochoscopes from KARL STORZ allow exploration of both the intra- and extrahepatic bile ducts as well as the surgical removal of gallstones.

Special Features:

- “Chip-on-the-tip” technology for high image quality²
- Compatible with the IMAGE1 S™ platform
- Menu navigation via camera head (e.g., Picture-in-Picture)
- Available in sizes 5.3 mm and 2.8 mm (sheath circumference)
- Direct transmission of hand movements through to the distal end

The new HD video choledochoscope is available in the following set:

11292VHK Flexible HD Video Choledochoscope Set, positive deflection, with suction channel and integrated light source, deflection of distal tip 210°/140°, direction of view 0°, angle of view 100°, working channel inner diameter 7 Fr./2.3 mm, sheath size 16 Fr./5.3 mm, working length 37 cm

The slim video choledochoscope is available in two different sets:

11292VSK Flexible Video Choledochoscope Set, positive deflection, integrated light source, steerable, deflection of distal tip 270°/270°, direction of view 0°, angle of view 90°, working channel inner diameter 3.6 Fr./1.2 mm, sheath size 8.5 Fr./2.8 mm, working length 50 cm

11292VSUK Same, with contrapositive deflection mechanism
