26 L

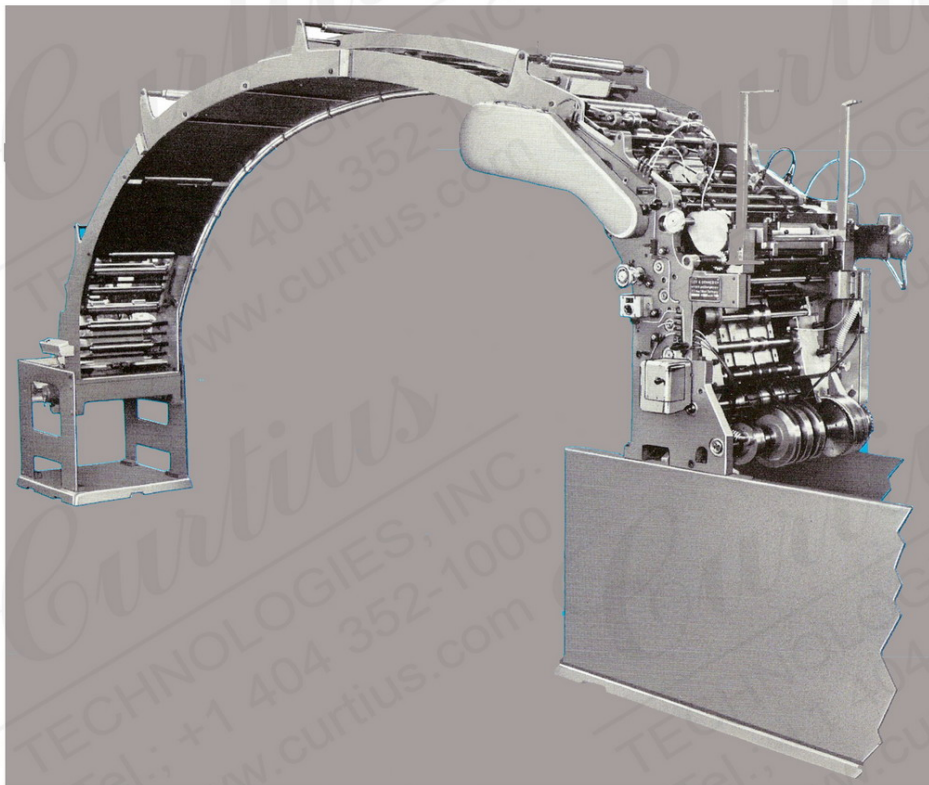

Rotary Gumming Attachment

The HELIOS 26 L is a latex gumming attachment which can be coupled to almost all HELIOS envelope making machines for the medium size range. In certain circumstances, envelope machines in field can be equipped with this attachment.

On this machine the seal flaps of ready-folded envelopes are reopened, and by means of a shape gummer the form of which corresponds to the desired gumming, a very smooth and even latex gumming can be applied. The gummed envelopes are delivered in an upright position with the seal flaps open.

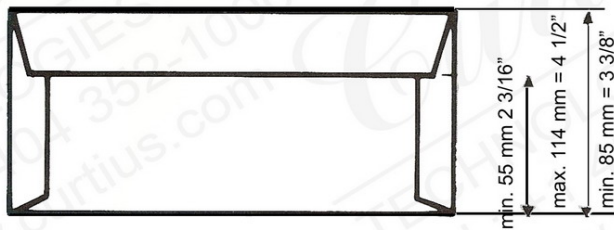

By the fitting of this attachment the possibilities of use of the respective envelope machine can be considerably increased.
