## Humphrey Zeiss 720

The Humphrey 720 Perimeter, Field Analyzer II utilizes a computerized silent projection system to examine the patient's visual field. Testing is performed with eleven test patterns with static threshold and screening strategies out to 90 degrees. A patented aspherically shaped bowl provides a compact ergonomic design to increase patient comfort. A video eye monitor enables the operator to align and monitor the patient's eye position. STATPAC 2 expert system software compares test results to age- matched normative data. A CTR touch screen improves user operation. Data is stored via a 3 1/2 floppy. A wheel chair accessible table with built in printer included.
