

Zeiss SL 130 Slit Lamp

Full spectrum from diagnosis to laser therapy

- **The system's high transmission minimizes light loss** for more light for observation and greater protection of the patients' eye from excessive irradiation
- **Dual application design** allows the SL 130 to be used as a traditional slit lamp as well as for laser therapy
- **Outstanding ZEISS optical system generates a brilliant, crisp image with razor-sharp definition**—slit rotation, slit decentration for retro-illumination and an illuminated field of 14 mm
- **Symmetrical slit projector controls allow left or right hand operation** for greater versatility
