Dual tool flatbed cutter

Dual tool system cuts and creases in one compact unit

Cut direct from your desktop - on demand, any shape (no setup costs)

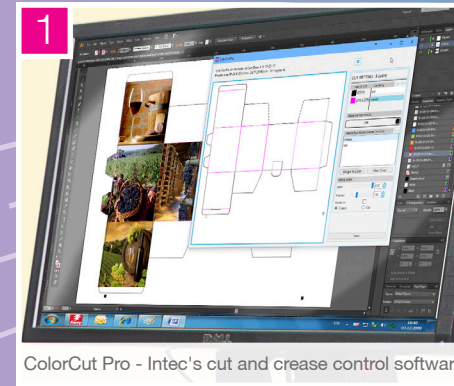

Optical registration accurately follows vector cut lines

Pneumatic vacuum suction of media

Contour cutter cuts thin films and card up to 450gsm / 600micron

Cuts typical SRA3 sheet in 30-60 seconds

Ideal for small and medium-sized production and samples of packaging, swing tickets and even labels

ColorCut Pro - Intec's cut and crease control software

Vacuum suction system holds media during cutting

Optical mark recognition for accurate cutting

Easy-to-use control panel

Dual tools for cutting and creasing simultaneously

Crease and cut packaging and card products

Digitally cut and crease any shape on card, or cut labels - ideal for packaging pieces & swing tickets, point-of-sale and more!

Affordable digital sheet cutting

The Intec ColorCut Flatbed series of cutters, sets new standards in cost, flexibility and speed.

ColorCut Flatbed cutters deliver digitally cut; card, paper, synthetics and labels of any shape, direct from your desktop. The pneumatic vacuum hold-down table secures media in place, whilst the integrated optical sensing system provides accurate registration of media, ensuring crisp, accurate cut lines.

4 models to fit your needs

The Intec ColorCut Flatbed series consists of 4 models, the FB520, FB600, FB900 and FB1060. The ColorCut FB520 offers the most affordable entry into Flatbed cutting, the dual tool cutting system comes complete with a fixed 400W vacuum hold-down, and a maximum media area of 520 x 350mm - plus an optional stand is available.

The popular ColorCut FB600 has an increased media area enabling larger digital sheets capable of accommodating folder templates in addition to packing, swing tickets and labels with maximum media area up to 600 x 450mm - ideal for 2

or more sheets side by side, while the FB900 and FB1060, range-topping models, have incrementally larger cutting areas, enabling users to cut either larger sheets or to batch more sheets next to each other for increased productivity. The FB600, FB900 and FB1060 models include an advanced variable 750W vacuum system accommodating a wider range of substrates (even laminated sheets).

Versatile and fast, sheet fed packaging production

Targeted to at the light production sector, the Flatbed series cuts a typical SRA3 sheet in just 30 - 60 seconds. This enables users to easily produce anything from as little as 1 - or as many as 1,000 sheets per day.

No cutting dies required

Using advanced digital contour cutting technology, the Flatbed series follows artwork cut lines drawn in Adobe® Illustrator® or CorelDRAW® - which means there is no need to purchase and wait for traditional dies to be made. Digital cutting is an 'on-demand' process, simply click 'CUT' and the sheets are produced to any shape, instantly and directly from the desktop.

Two tools enhance productivity with folding lines as well as cut lines

The Flatbed series utilises a dual tool cutting head. This enables both tools to operate independently for processes such as cutting and creasing, in one operation - reducing operation time and improving productivity.

Whilst the 'cut' tool makes the actual full-depth cuts, the 'crease' tool, creases all fold lines with its ball-bearing head, thus avoiding the exposure of paper fibres through printed areas.

Label production too...

The Flatbed series also performs perfectly for sheet label cutting - cutting absolutely any shape desired.

Ergonomic fit in your office

The FB600, FB900 and FB1060 models are supplied as standard with a stand, and an acoustic cover for the vacuum system enabling the unit to sit in your office or work area easily and comfortably.

So easy to use...

1 Intec's FB ColorCut Pro cutting software accepts both eps files from CorelDRAW and native Adobe Illustrator files.

2 The Flatbed series has a high-powered vacuum suction system which holds media in place, removing the risk of lifting during operation.

3 An optical sensor reads the special marks on your printed sheet to ensure accurate cutting. It also enables the Intec FB ColorCut Pro software to calculate any scale or skew issues and adjust the cut line accordingly.

4 The easy-to-use control panel allows users to easily adjust settings, such as direction, increased cutting force and even the vacuum system.

5 The dual tool cutting head enables a combination of tools to be used simultaneously such as a knife for cutting through the media and a roller ball for creasing - enabling an accurate folding line, without damaging the printed surface.

6 The finished product can be cut and creased in one smooth operation.
