7.5 MW 1957 Refurbished GE TT-8695 Steam Turbine Generator Set

7.5 MW 1957 Refurbished GE TT-8695 Steam Turbine Generator Set

Description

This steam turbine generator set, originally manufactured in 1957, has been fully refurbished to deliver reliable and efficient performance for industrial or utility power applications. The unit features a single-condensing steam turbine coupled to a synchronous generator, engineered for dependable operation in continuous or standby service. The refurbishment process included mechanical inspection, component replacement, and system upgrades to extend operating life and ensure compliance with modern performance and safety standards.

KEY FEATURES:

- Rated capacity: 7.5 MW continuous output
- Type: Condensing steam turbine
- Option for integration with existing steam cycle or industrial process

ADVANTAGES

- Cost-effective solution for reliable steam-based power generation
- Suitable for industrial plants, process industries, or small-scale utility operations
- Capable of flexible load operation and easy integration into existing infrastructure

Manufacturer	GE
Model	TT-8695
Year	1957
Condition	Refurbished
Location	North America
Qty Available	1 Unit
Category	Steam
Subcategory	1 – 9 MW
Stock Number	USP010881
Wattage	7.5 MW
Hours	N/A
Frequency	60 Hz
Fuel Type	Steam
Voltage	4160 Volts
Balance of Plant Available? (BOP)	-
