43 MW 1995 Used GE LM6000 Natural Gas Turbine Generator Set

43 MW 1995 Used GE LM6000 Natural Gas Turbine Generator Set

Description

This 43 MW used natural gas turbine generator set, manufactured in 1995, is designed for reliable medium-scale power generation in industrial, utility, and independent power producer (IPP) applications. The unit features an aero-derivative turbine configuration known for its high efficiency, fast start-up capability, and operational flexibility. Suitable for continuous, peaking, or standby duty, it delivers stable power output with low emissions and reduced maintenance requirements.

KEY FEATURES:

- Rated electrical output: 43 MW
- Natural gas-fueled turbine for clean and efficient combustion
- High thermal efficiency suitable for combined-cycle operation
- Modular configuration allowing ease of installation and maintenance

ADVANTAGES

- Compact design enables flexible plant layout and transportability
- Reduced fuel consumption and emissions compared to older heavy-duty models
- Suitable for integration in simple or combined-cycle power plant configurations

Manufacturer	General Electric
Model	LM6000
Year	1995
Condition	Used
Location	Asia
Qty Available	2 Units
Category	Natural Gas Turbines
Subcategory	10 – 99 MW
Stock Number	USP010908
Wattage	43 MW
Hours	18000 hours
Frequency	50 Hz
Fuel Type	Natural Gas
Voltage	11000 Volts
Balance of Plant Available? (BOP)	-
