7.2 MW 2000 Used Solar Taurus T70 Natural Gas Turbine Generator Set

7.2 MW 2000 Used Solar Taurus T70 Natural Gas Turbine Generator Set

Description

This gas turbine generator set is a reliable and efficient solution for industrial and utility-scale power generation. The Taurus T70 is a well-proven industrial gas turbine known for its durability, compact footprint, and excellent part-load performance. It is engineered to operate efficiently in continuous base load service as well as in peaking and standby applications.

The unit is designed with robust auxiliary systems, advanced controls, and high-quality components that ensure dependable long-term operation. Its compact modular design makes installation straightforward, while its dry low emissions (DLE) combustion system provides reduced environmental impact.

KEY FEATURES:

- Rated output: 7.2 MW
- Dry Low Emissions (DLE) combustion technology
- Compact modular design for easier transport and installation

ADVANTAGES

- Low emissions profile meeting stringent environmental standards
- Excellent fuel efficiency with competitive heat rate for its class
- Space-saving design that integrates well into existing facilities

Manufacturer	Solar Taurus
Model	T70
Year	2000
Condition	Used
Location	North America
Qty Available	1 Unit
Category	Natural Gas Turbines
Subcategory	1 – 9 MW
Stock Number	USP010872
Wattage	7.2 MW
Hours	2500
Frequency	60 Hz
Fuel Type	Natural Gas
Voltage	13800 Volts
Balance of Plant Available? (BOP)
