0.44 MW 2011 Used Perkins P500P2 Diesel Generator Sets

0.44 MW 2011 Used Perkins P500P2 Diesel Generator Sets

Description

This generator set offers a reliable mid-size standby or prime power solution, suited to industrial, commercial, and institutional applications where moderate electrical loads need to be met with dependable support during outages or as main-line power in areas with unreliable utility service.

Designed for flexibility, the set can support a wide range of applications including industrial plants, commercial complexes, data centers, and institutional facilities. At approximately 440 kW (550 kVA) standby capacity, it is well suited for critical backup supply during outages as well as continuous duty operation in areas with limited or unreliable grid access.

KEY FEATURES:

- Rated output: 0.44 MW
- Diesel-fueled with turbocharged and charge-cooled engine
- Designed for both prime and standby duty applications

ADVANTAGES

- Cost-effective used units offer lower capital cost while still delivering dependable service
- Flexible applications suitable for industrial, commercial, institutional, and remote site use
