

Seiko ColorPainter H2-104s & H2-74s SII

Midwest is pleased to offer Seiko ColorPainter H2 Series wide-format low-solvent printers. The H2 Series maintains the same high-speed printing of its predecessor with improved reliability and productivity, making it perfect for large format banners and high volume printing with short turnaround times.

Available in 104" or 74" Width Models

Great for...

- Large-Format Banner Printing
- Indoor and Outdoor Graphics
- Backlit Banners
- Mesh Banners* Without Liners
- Double-sided Prints
- PVC

*With optional mesh printing kit.

Features & Benefits

- Extreme Speed
- Unparalleled Image Quality and Less Graininess with Integrated SmartPass Technology 3
- 900 dpi at Maximum Quality Mode
- Capable of Expressing Real Gradation, Light Shadows and Metallic Textures
- Easy to Use - CP Manager (included) Makes Control Easy
- Double-Sided Printing Support
- Impressive ink options - Choose from GX 3M Ink or Seiko's High Density GX Inks
- Subcartridges Allow for Quick Ink Replacement Without Interrupting Print Jobs
- Utilizes Smart Nozzle Mapping and Dynamic Dot Printing Technology

Fastest Printer in its class!

Dynamic Dot Printing Technology uses three different dot sizes to maximize image quality and proper color density. That means outstanding image quality with less graininess, even at the highest print speed!

Fastest print mode achieves 538 sfph (50 m²/h) in 8-color mode!

	Speed	
	8 Colors	4 Colors
Banner (Draft 1 Mode)	538 sfph 50 m ² /h	1075 sfph 100 m ² /h
Vinyl (Normal 1 Mode)	307 sfph 28.6 m ² /h	614 sfph 57.1 m ² /h

Advanced Technology

The ColorPainter H2 Series utilizes Smart Pass Technology 3 and Smart Nozzle Mapping to print with perfect image quality every-time.

- **Smart Pass Technology 3** helps to reduce overspray and eliminate pass-to-pass banding to provide consistently great results.
- **Smart Nozzle Mapping** helps to remap clogged nozzles with no speed loss, thereby reducing downtime and increasing your productivity.

Ink Advancements

Two Color Modes: 4-color or 8-color

- 4-color mode is perfect for productivity-oriented and cost-sensitive jobs
- 8-color mode is best for image quality-oriented jobs. Includes Gray and Light Gray colors.

Choose your ink: Seiko's GX Ink or GX 3M Ink

Seiko's GX Ink

- **Gray and Light Gray Ink**
With Gray and Light Gray inks, the ColorPainter H2 Series is capable of expressing real gradation, light shadows and metallic texture which cannot be achieved with composite colors
- **Large Capacity Ink Bags**
The ColorPainter H2 Series utilizes efficient 1.5 liter ink bags, which not only reduce the necessity for frequent ink replacement, but also minimize environmental waste.
- **Subcartridges**
Subcartridges allow you to replace ink on the fly without interrupting print jobs. Inks in the subcartridges will not be wasted in the switching operation between the two color modes. This reduces the amount of waste ink to a minimum at the time of switching the modes.

GX 3M Ink

GX 3M ink is a low solvent ink that is specifically designed to offer rich glossy colors on 3M graphic films, and deliver industry-leading flexibility, outdoor durability and lightfastness.

This 8 color ink set can be used in both 4 and 8 color configurations in all ColorPainter H Series printers, and offers outdoor durability up to 10x over Latex-type printers. GX 3M ink matches the color gamut of the original GX and offers excellent conformability. It is the perfect ink for all types of fleet graphics, custom vehicle wraps, banners, signs, awnings, fabrics, and backlit films.

ColorPainter H Series printers are the most cost effective printers available to produce graphics backed by the 3M MCS™ Warranty.

- High print speed on large banners
- Highly precise indoor graphics
- Backlit banners
- Mesh banners without liners
- Double-sided prints
