

**WINKLER+  
DÜNNEBIER** **WD**

**B 1 S**

## **Rotary Pocket Machine**

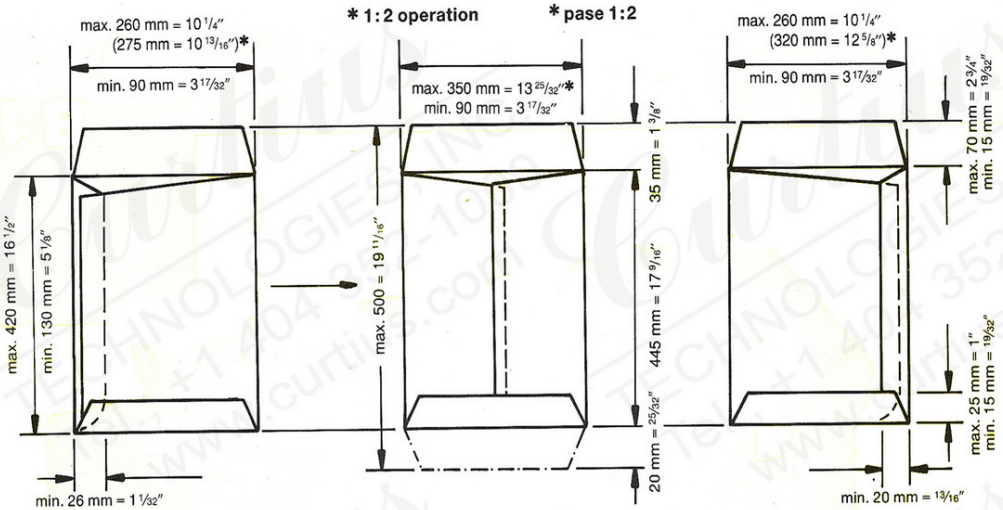

For manufacturing pockets with side or centre seam gumming we recommend our model B 1 S.

The machine works from pre-cut blanks. By means of a sucker the lowermost blank of the pile on the feed plate is fed into the machine. In this way the supply of blanks can be replenished while the machine is operating which allows continuous operation.

The B 1 S is remarkable for its rapid size change and easy operation and is suitable for long and short runs.

### size ranges

### Technical data

maximum output pockets per minute	180
paper weights	60 – 130 g/m <sup>2</sup>
power required approx.	7 kW
overall blank length	max. 720 mm
overall blank width	max. 500 mm
dimensions of the machine	
length approx.	2.500 mm
width approx.	1.600 mm
net weight approx.	1.950 kg
