

# Horizontal Baler

MODEL  
**ESP III**

## No Fluffer, No Shredder, Multi-Material Baler

The McClain/EPCO ESP III horizontal baler is designed to accept multi-material without the use of a fluffer or shredder.

The ESP III platen penetrates to within 15" of the front door with over 124,000 lbs of force. This ensures high bale density and maintains a standard 60 x 30 x 48 mill size bale.

The ESP III has four different conveyor options and a cart dumping system that will give you the flexibility to bale up to 3 tons per-hour.
