

4. Page Numbering

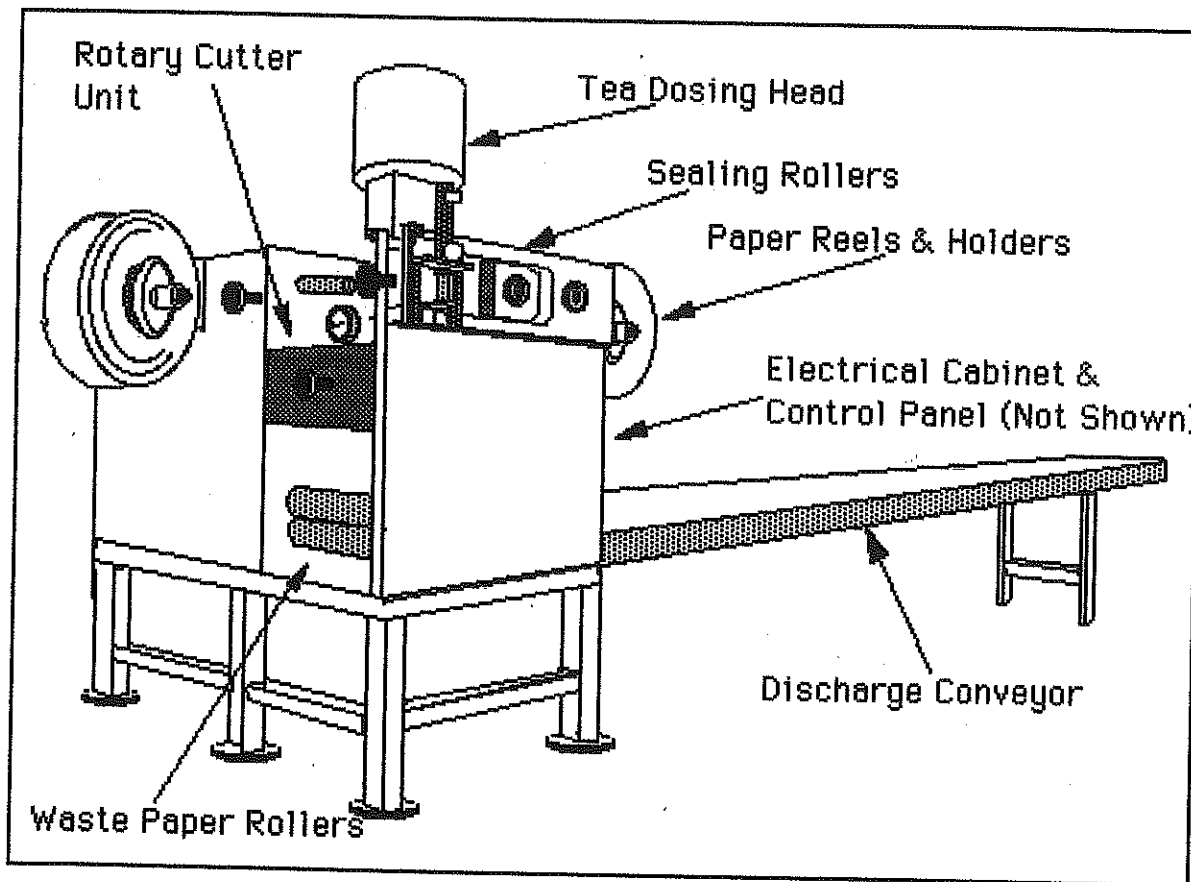

The method of numbering pages adopted by Autowrappers Ltd. and shown in the 'Footer' is as follows:-

5. Figures

In the interest of clarity the diagrammatic figures used in this manual have been generalised and are not necessarily an exact representation.

6. Machine Layout (Typical)

7. Wrapping Material

This machine was tested and proved using the wrapping material as specified in the setting sheets. The machine settings are liable to be

General Information

1. **Machine Settings**

This machine has been tested using specified product/s and wrapping material/s. Any changes to either product, wrapping material or any machine setting may cause the machine to perform with unpredictable results. Therefore, before carrying out any changes please contact **Autowrappers Ltd.** for guidance.

2. **Environmental Conditions**

As environmental conditions are liable to influence some machine settings, it must be understood that the contents of the setting sheet are for guidance only.

3. **Wrapping Material**

This machine was tested and proved using the wrapping material as specified in the setting sheets. The machine settings are liable to be effected if other than the specified material is used.

Where no specification is included the machine was tested on a suitable alternative material. For further information regarding material specifications please contact **Autowrappers Ltd.**
