Rotary Tissue Lining Machine

Rotary Tissue Lining Machine

HELIOS 88

for envelope and pocket blanks. The paper and the material to be patched in are fed from two separate piles.

Outstanding features of this machine are extreme accuracy in register, simple operation and high output. For manufacturers of luxury envelopes the HELIOS 88 is an indispensable auxiliary machine.

Instead of tissue lining also paper or glassine patches as well as synthetic foils can be applied which considerably increases the possibilities of use of this machine.

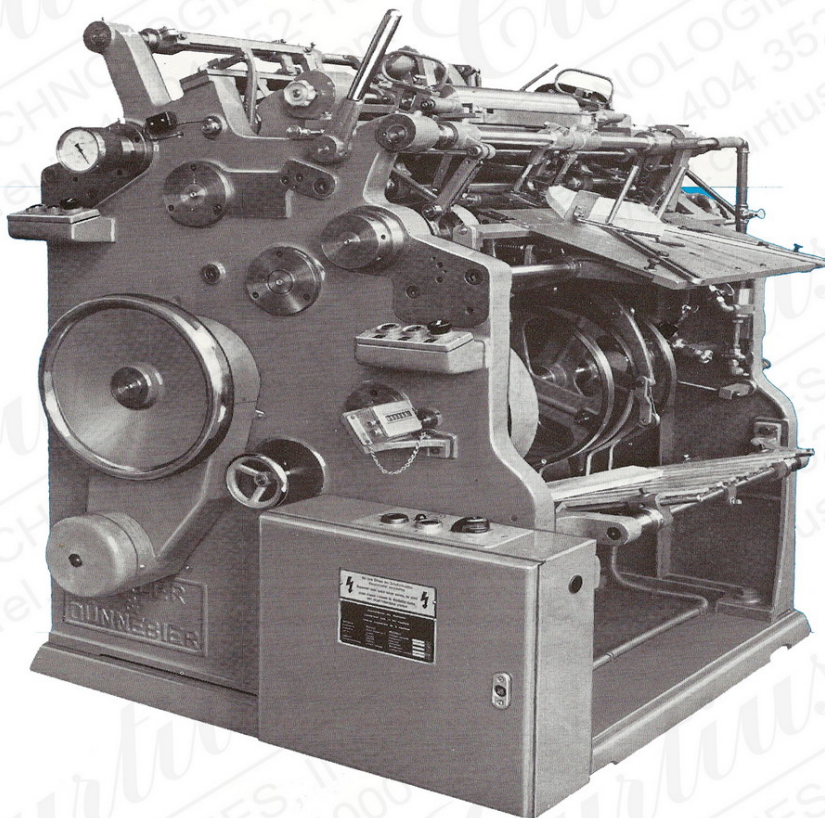

The lined blanks are then folded on our envelope and pocket machines.
