

SPECIAL MAGNETIC CHUCK FOR CARBIDE BLANKETTS

The magnetic chuck is suitable for holding widia (HM) tools, used for woodworking during re-grinding operations. It is especially suited for linear or surface grinders because the supporting bed is parallel with the magnetic surface. The chuck has a strong holding power because the tools lay directly onto the magnets and so you can resharpen very small pieces. The magnetic chuck can be :

- a) secured to any type of magnetic chuck ;
- b) mechanically stirruped by means of the four holes around the edges, aligning or flanking a number of chucks.

The chuck is available in different sizes :

- 1) mm 100 x 60 x 90
- 2) mm 200 x 90 x 20
- 3) mm 300 x 90 x 20
- 4) mm 400 x 90 x 20
- 5) mm 500 x 90 x 20
- 6) mm 600 x 90 x 20
- 7) other sizes on request

By aligning or flanking a number of magnetic chucks, extremely strong magnetic surfaces can be obtained.
