INSTALLATION

1st. Edition

CONTENTS, INSTALLATION

CHAPTER 1. ENVIRONMENT OF MACHINE INSTALLATION AREA 1

CHAPTER 2. PRECAUTIONS FOR UNPACKING THE MACHINE 1

CHAPTER 3. EXTERNAL VIEW 2

3.1 Machine external view 2

3.2 With ASR F-34M 4

3.3 With MS tube outside bar feeding 5

3.4 With PF-V3S 6

CHAPTER 4. TRANSPORTING THE MACHINE 7

4.1 Location of machine center of gravity 7

4.2 Slinging the machine 8

4.3 Movement by forklift 9

CHAPTER 5. INSTALLATION 10

5.1 Preparing the levelling plates and work tools 10

5.2 Installing the machine 10

5.3 Location of levelling bolts 11

CHAPTER 6. REMOVING THE FIXING PLATES FROM THE MACHINE 12

CHAPTER 7. LEVELLING THE MACHINE 13

CHAPTER 8. CONNECTING THE COMPRESSED AIR SUPPLY 14

CHAPTER 9. CONNECTING POWER SUPPLY TO THE MACHINE 15

9.1 Electrical power requirements 15

9.2 Selecting a transformer 16

9.3 Selecting a power line and ground wire 16

9.4 Connecting power supply to the machine 17

CHAPTER 10. LUBRICATION 20

10.1 Supplying hydraulic oil 21

10.2 Supplying coolant oil 22

10.3 Supplying lubricating oil 23

CHAPTER 11. CLEANING THE MACHINE 24

CHAPTER 12. INSTALLING A BAR FEEDER 25

12.1 Bar feeder 26

12.2 ANF interface 26

OUTLINE

1st. Edition

CONTENTS, OUTLINE

CHAPTER 1. GENERAL LAYOUT OF MACHINE CONSTRUCTION 2

CHAPTER 2. SPECIFICATIONS AND TECHNICAL DATA 7

2.1 Machine specifications 7

2.2 Specifications of the NC (FANUC 21T) 10

TOOLING

1st. Edition

CONTENTS, TOOLING

CHAPTER 1. TOOLING AREA 4

CHAPTER 2. TURRET TOOLING SYSTEM (METRIC) 5

2.1 Tool system (standard) 5

2.2 Tool system (for high pressure coolant) 6

CHAPTER 3. TURRET TOOLING SYSTEM (INCH) 7

3.1 Tool system (standard) 7

3.2 Tool system (for high pressure coolant) 8

CHAPTER 4. TAIL STOCK TOOL SYSTEM 9

OPERATION

1st. Edition

CONTENTS, NC OPERATING

CHAPTER 1. SPLASH GUARD INTERLOCK 1

CHAPTER 2. OPERATING THE PANEL 4

2.1 Panel general view 4

2.2 The NC panel 7

2.3 The operating panel 9

CHAPTER 3. OPTIONAL PANEL 13

CHAPTER 4. MANUAL OPERATION SWITCH 14

4.1 Main chuck open/close switch 14

4.2 Bar feeding "return" "advance" selection switch 15

CHAPTER 5. OPERATIONAL PROCEDURES 16

5.1 Explanations of expression symbols 16

5.2 Turning the power switch ON/OFF 17
5.2.1 Turning the power switch ON 17
5.2.2 Turning the power switch OFF 18

5.3 Operating the emergency stop and the reset button 19
5.3.1 The emergency stop button 19
5.3.2 Stopping a cycle by the reset button 19

5.4 Explanation of indicated location 20
5.4.1 Displaying function key 20
5.4.2 Displaying mode 20
5.4.3 Displaying input data 21
5.4.4 Displaying program number and sequence number 21
5.4.5 Displaying alarm 22
5.4.6 Displaying soft key 22

5.5 Help function 23
5.5.1 Displaying "ALARM DETAIL" 24
5.5.2 Displaying "OPERATION METHOD" 26
5.5.3 Displaying "PARAMETER TABLE" 28

5.6 Displaying current position 29

5.7 Performing manual zero return 30

5.8 Positioning by manual operation 32

5.9 Starting cycle in MDI mode 34

5.10 Setting the work coordinate system (Geometry offset) 36
5.10.1 For a Turning and a boring tool 36
5.10.2 For a drill, and a reamer 43
5.10.3 Altering the work coordinate system 44

5.11 Displaying and setting tool nose radius compensation 46
5.11.1 Displaying & setting tool nose radius compensation 46
5.11.2 Commanding the direction of theoretical cutting edge 48

5.12 Displaying and Setting Wear Offset 49
5.12.1 Displaying wear offset 50
5.12.2 Setting wear offset 51

5.13 Using the EDIT mode 54
5.13.1 Designating an editing portion 54
5.13.2 Altering a word 55
5.13.3 Inserting a word 56
5.13.4 Deleting a word 57
5.13.5 Deleting a block 58
5.13.6 Deleting two blocks or more 59
5.13.7 Deleting a program 60
5.13.8 Deleting all program 60

5.14 Displaying Program Memory Used 61

5.15 Returning to the head of program 62
5.15.1 In EDIT MODE 62
5.15.2 In AUTO mode 63

5.16 Using the SEARCH function 64
5.16.1 Searching a program number 64
5.16.2 Searching a sequence number in AUTO mode 66
5.16.3 Searching a input data by address 68

5.17 Starting cycle in AUTO mode 70
5.17.1 Starting cycle in AUTO mode 70
5.17.2 Displaying command value 72
5.17.3 Starting cycle in AUTO mode with the single block 74

5.18 Displaying command value 75

5.19 Loading programs from an external I/O device to the memory 77

5.20 Outputting programs from the memory to an external I/O device 79

5.21 Setting Input/Output parameter (SETTING PARAMETER) 81

5.22 Alarm Display 84

5.23 Alarm History Display 85

5.24 Using MACHINE END RELEASE button 86

PROGRAMMING

1st. Edition

CONTENTS, PROGRAMMING

CHAPTER 1. OUTLINE OF PROGRAMMING 1

1.1 Procedure for making program 1

1.2 Axes names 2

1.3 Part dimensioning 3

1.4 Part layout sheet 4

1.5 Process sheet 5

CHAPTER 2. PROGRAM COMMANDS 6

2.1 Move commands of the cutting tools 8

2.2 Absolute and incremental input 9

2.3 The program format 12

2.4 G-Function (Preparatory Function) 16
2.4.1 G50 (Maximum spindle speed setting) 16
2.4.2 G00 (Positioning) 17
2.4.3 G01 (Linear interpolation, 45° chamfering, Rounding) 19
2.4.4 G02, G03 (Circular interpolation, Radius programming for circular interpolation) 25
2.4.5 G04 (Dwell) 30
2.4.6 G10 (Program input of offset values) 32
2.4.7 G20, G21 (Inch / Metric input) 33
2.4.8 G27 (Reference point return check) 34
2.4.9 G28 (Automatic return to reference point) 35
2.4.10 G32 (Thread cutting) 36
2.4.11 Other G-codes 45
2.4.12 List of G-codes and their group 46

2.5 Feed functions 47
2.5.1 Rapid traverse rate 47
2.5.2 Cutting feed rate 47
2.5.3 Threading feed rate 48
2.5.4 Feed rate override 48

2.6 S-Function (Spindle speed function) 49
2.6.1 Constant surface speed control cancel (G97) 49
2.6.2 Constant surface speed control (G96) 50

2.7 T-code for the main turret (Tool function) 52
2.7.1 Tool selection (Turret indexing) 52
2.7.2 Setting work coordinate system (Setting geometry offset) 54
2.7.3 Wear offset 56

2.8 M-code(Miscellaneous function) 57
2.8.1 List of M-codes 57
2.8.2 Descriptions of M-codes 59
2.8.3 Moving the tailstock or traverse by M-codes 70

2.9 Other function 71
2.9.1 "/" Block Delete (Block Skip) 71

CHAPTER 3. EXAMPLES OF PROGRAMMING FOR VARIOUS OPERATIONS 72

3.1 Facing 72

3.2 Turning 74

3.3 Drilling 75

3.4 Boring 76

3.5 Grooving 77

3.6 Taper and Chamfering 78

3.7 Radius Cutting 79

3.8 Cutting off 81

3.9 Bar feeding 83

3.10 Threading 84

CHAPTER 4. TOOL NOSE RADIUS COMPENSATION (G40 ~ G42) 86

4.1 Different dimension by tool nose radius 86
4.1.1 Taper cutting 86
4.1.2 Circular cutting 87

4.2 The motion of tool nose radius compensation 88

4.3 Commanding tool nose radius compensation 89
4.3.1 G-code designation 89
4.3.2 Setting the direction of the theoretical cutting edge 90
4.3.3 Setting tool nose radius value 91
4.3.4 Setting contents by MDI operation 91
4.3.5 Commanding the compensation 91

4.4 Prohibited command on the compensation 93

4.5 Program examples with tool nose radius compensation 94
4.5.1 Example - 1 94
4.5.2 Example - 2 96

CHAPTER 5. EXAMPLES OF PROGRAMMING 97

5.1 Part dimensioning 97

5.2 Part layout sheet 98

5.3 Work coordinate system setting and tool selecting position 99

5.4 Process sheet 100

CHAPTER 6. CANNED CYCLE 104

6.1 G90 (Turning cycle) 104
6.1.1 Straight turning cycle 104
6.1.2 Taper turning cycle 105
6.1.3 Notes on programming 107
6.1.4 Example of programming 108

6.2 G92 (Thread cutting cycle) 109
6.2.1 Parallel thread cutting cycle 109
6.2.2 Taper thread cutting cycle 110
6.2.3 Notes on programming 110
6.2.4 Example of programming 112

6.3 G94 (Facing cycle) 115
6.3.1 Facing cycle 115
6.3.2 Taper facing cycle 116
6.3.3 Notes on programming 117
6.3.4 Example of programming 118

CHAPTER 7. MULTIPLE REPETITIVE CUTTING CYCLES 119

7.1 G71 (Stock removal cutting in turning) 119
7.1.1 Method of program 120
7.1.2 Notes on the programming 121
7.1.3 Example of programming 123

7.2 G72 (Stock removal cutting cycle in facing) 125
7.2.1 Method of program 125
7.2.2 Notes on programming 127
7.2.3 Example of programming 128

7.3 G73 (Pattern repeated cutting cycle) 130
7.3.1 Method of program 130
7.3.2 Notes on programming 131
7.3.3 Example of programming 132

7.4 G70 (Finish cutting cycle) 134
7.4.1 Method of program 134
7.4.2 Notes on programming 134

7.5 G74 (Longitudinal pecking cycle) 135
7.5.1 Method of program 135
7.5.2 Notes on programming 136
7.5.3 Example of programming 137

7.6 G75 (Cross pecking cycle) 138
7.6.1 Method of program 138
7.6.2 Notes on programming 139
7.6.3 Example of programming 140

7.7 G76 (Thread cutting cycle) 141
7.7.1 Method of program 141
7.7.2 Notes on programming 142
7.7.3 Example of programming 144

7.8 Notes on multiple repetitive cycles (G70 to G76) 145

CHAPTER 8. STANDARD PROGRAM FORMAT 146

8.1 Programming of bar work 146
8.1.1 In case of M12 (Bar push out) 146

8.2 Programming without tool nose radius compensation 147

8.3 Programming with tool nose radius compensation 148

8.4 Tapping program 149

MACHINE OPERATION

1st. Edition

CONTENTS, MACHINE OPERATION

CHAPTER 1. ADJUSTING THE CHUCK PRESSURE 1

1.1 Collet gripping force adjusting range 6

1.2 Power chuck gripping force adjusting range 6

1.3 Adjusting chuck gripping force 6

1.4 Gripping force reduction curve of the power chuck 7

CHAPTER 2. CHUCK SYSTEM 8

2.1 Changing the chuck system 8
2.1.1 Collet chuck system 8
2.1.2 Power chuck system 8

2.2 BNC-34C$_3$, Installing a main collet
(DIN-171E, B&S #22, and B&S #22C collet) 9

2.3 BNC-42C$_3$, Installing a main collet
(DIN-173E, and B&S #22D collet) 11

2.4 Power chuck 13
2.4.1 Specifications 13
2.4.2 Changing outside and inside diameter chucking 13
2.4.3 Installaing the power chuck for main spindle 14
2.4.4 Jaw dimensions 17
2.4.5 Machining soft jaws 19

CHAPTER 3. BAR FEEDER 20

3.1 Bar feeding system 20
3.1.1 ASR F-34M 21
3.1.2 MS tube type outside bar feeding 22
3.1.3 PF-V3S 32

CHAPTER 4. COOLANT 35

4.1 M-code 35

4.2 Adjusting the flow rate 35

CHAPTER 5. HIGH-PRESSURE COOLANT 36

5.1 M-code 36

5.2 Adjusting the nozzle 36
5.2.1 Turning tool holder 36
5.2.2 Plain head 37

CHAPTER 6. AIR BLOW 38

6.1 M-code 38

6.2 Adjusting the position 38

CHAPTER 7. PARTS CATCHER 39

7.1 Specification 39

7.2 M-code 39

7.3 Operation 39

CHAPTER 8. AUTOMATIC FIRE EXTINGUISHER WITH AUTO POWER OFF 40

CHAPTER 9. CUT-OFF CONFIRMATION 40

9.1 M-code 40

9.2 Operation 40

9.3 Adjustment 41

CHAPTER 10. PARTS CONVEYOR 41

10.1 M-code 41

CHAPTER 11. OIL MIST COLLECTOR 41

CHAPTER 12. TAILSTOCK 42

12.1 Specifications 44

12.2 Operation 44

12.3 Adjusting deceleration and pressure reduction 44

CHAPTER 13. WHEN TAILSTOCK IS USED AS DRILLING SLIDE 46

13.1 Adjusting cutting feed start position 46

13.2 Adjusting advanced end position 46

MAINTENANCE

1st. Edition

CONTENTS, MAINTENANCE

CHAPTER 1. MAINTENANCE AND PREVENTIVE MAINTENANCE 7

CHAPTER 2. PERIODIC SERVICING 7

2.1 Inspection at the beginning after initial installation 7
2.1.1 Inspecting machine level 7
2.1.2 Changing oil 7

2.2 Recommended oil and grease 8

2.3 Recommended coolant oil 10

2.4 Maintenance schedule 12

2.5 Procedures for preventive maintenance 17
2.5.1 Inspection of radial clearance of front bearing 17
2.5.2 Measurement of thrust clearance of front bearing 17
2.5.3 Radial clearance of rear bearing 18
2.5.4 Tension of synchronous belt 18
2.5.5 Measurement of the clearance of X-axis slide 19
2.5.6 Measurement of the clearance of Z-axis slide 19
2.5.7 Gib adjustment of each slide 20
2.5.8 Cleaning the window of the splash guard 22
2.5.9 Inspection and cleaning of flow proper unit 22
2.5.10 Cleaning of filter 23
2.5.11 To replace the battery proceed as follows 24

CHAPTER 3. CIRCUIT DIAGRAM 25

3.1 Hydraulic circuit diagram 25
3.1.1 Hydraulic circuit diagram 25
3.1.2 List of part 26

3.2 Pneumatic circuit diagram 28

3.3 Lubricating system 29

CHAPTER 4. ELECTRICAL CONTROL 30

4.1 Electrical equipments 30
4.1.1 Electrical equipments on the machine 30
4.1.2 Layout of electrical equipments in the NC box 31
4.1.3 Magnetic switch, magnetic contactor 33

4.2 Power supply voltage 34

4.3 Parameters for external Input/Output device 35
4.3.1 Display and change of SETTING-PARAMETER 35
4.3.2 Parameters for external Input/Output device 37

4.4 Parameter and PMC parameter 41
4.4.1 Parameter 41
4.4.2 List of PMC parameter 41

4.5 Timers 59
4.5.1 Setting values of timers 59
4.5.2 How to set timers 59
4.5.3 List of timers 61

4.6 PMC counter 65
4.6.1 Display procedures 65

4.7 Input/Output signal display 67
4.7.1 PMC diagnosis 67
4.7.2 Display procedure of Input/Output signals 68
4.7.3 How to read Input/Output signals 70
4.7.4 Input/Output signal 71
4.7.5 Output signal (Signal from NC to lamp and relays) 73

4.8 Detection of turret position 74

TROUBLESHOOTING

1st. Edition

CONTENTS, TROUBLESHOOTING

CHAPTER 1. TROUBLESHOOTING 7

CHAPTER 2. OPENING THE ELECTRICAL CABINET DOORS 8

2.1 "WARNING" 8

2.2 Main breaker handle operation 11

CHAPTER 3. TROUBLESHOOTING WHEN ALARM LAMP IS ON 12

3.1 Fault finding with NC alarm 12
3.1.1 Servo alarms 12
(a) 400, Overload alarm 12
(b) 401, Ready signal (VRDY) OFF 13
(c) The LED indicator on the servo amplifier 14
(d) 404, VRDY ON 16
(e) 405, Zero return movement is not completed 16
(f) 410, 411 Excessive positional deviation alarm 16
(g) 413, LSI overflow 17
(h) 414, Detection related error 17
(i) 416, Disconnection alarm 18
(j) Incorrect parameter setting 18
3.1.2 Stored stroke limit alarm 19
3.1.3 Machine end limit switch activates 20
3.1.4 Overheat alarm 20
3.1.5 System alarms 21

3.2 Fault finding with machine alarm, NC alarm and etc., ... 22
3.2.1 Displaying machine alarm, inverter alarm and etc., ... 22
3.2.2 Alarm numbers ⟷ Diagnosis numbers 23
3.2.3 Descriptions of machine alarms, inverter alarms and etc.,. 24
AL1 (D0000.0) 24
AL2 (D0000.1) 25
AL3 (D0000.2) 25
AL4 (D0000.3) 26
AL5 (D0000.4) 26
AL7 (D0000.6) 27
AL10 (D0001.1) 29
AL15 (D0001.6) 29
AL16 (D0001.7) 29
AL18 (D0002.1) 29

AL20(D0002.3) 29
AL21(D0002.4) 30
AL24(D0002.7) 30
AL31(D0003.6) 30
AL32(D0003.7) 30
AL33(D0004.0) 30
AL34(D0004.1) 30
AL35(D0004.2) 31
AL36(D0004.3) 31
AL38(D0004.5) 31
AL39(D0004.6) 31
AL40(D0004.7) 31
AL41(D0005.0) 31
AL42(D0005.1) 32
AL47(D0005.6) 32
AL49(D0006.0) 32
AL50(D0006.1) 32
AL51(D0006.2) 32
AL53(D0006.4) 33
AL56(D0006.7) 33
3.2.4 List of machine alarms, inverter alarms and etc.,. 34
3.2.5 Alarm lamps 37

CHAPTER 4. TROUBLESHOOTING WHEN ALARM LAMP IS OFF 38

4.1 Main power does not turn on (the CRT does not display) 41

4.2 Machine ready lamp does not turn on (the CRT displays) 42

4.3 Jog feed does not work 43

4.4 Zero return does not work 44

4.5 Main turret indexing abnormality 45
4.5.1 Main turret does not index 45
4.5.2 Main turret has position detector alarm 47

4.6 Automatic cycle does not start on AUTO or MDI mode 48

4.7 Cycle start lamp is ON, but machine does not move 50
4.7.1 Display of status in which command is not apparently executed 51
4.7.2 Information indicating automatic operation stop, automatic idle statuses 52

4.8 Main spindle chuck abnormality 53
4.8.1 Main spindle chuck does not open 53
4.8.2 Main spindle chuck does not close 56

4.9 Main spindle does not rotate 58

4.10 MS tube type outside barfeeding abnormality 60
4.10.1 MS tube type outside barfeeding does not advance 60
4.10.2 MS tube type outside barfeeding does not return 62

4.11 Magazine bar feeder does not advance 64

4.12 Coolant oil does not come out 65

4.13 Parts catcher does not move 66
4.13.1 Parts catcher does not advance 66
4.13.2 Parts catcher does not return 67

4.14 High-pressure coolant for main turret does not come out 68

4.15 Tail stock does not move 69
4.15.1 Tail stock does not advance 69
4.15.2 Tail stock does not return 71

4.16 Cut-off confirmation does not move 73
4.16.1 Cut-off confirmation does not advance 73
4.16.2 Cut-off confirmation does not return 74

4.17 Main spindle airblow does not work 75
