KIWAMI series

MZN-U320H-VCJ (α1)

INSTRUCTION MANUAL

HOWA MACHINERY, LTD.

OPERATION MANUAL

—TABLE OF CONTENTS—

PAGE

1. INTRODUCTION 1-1

2. SAFETY INSTRUCTIONS 2-1,2,3

3. SPECIFICATION OF MACHINE AND NC UNIT 3-1
   - 3.1 Standard specification of machine 3-1
   - 3.2 Standard functions of CNC unit 3-2
   - 3.3 M code list 3-3
   - 3.4 G code list 3-4,5
   - 3.5 Overall view 3-6
   - 3.6 Strokes 3-7
   - 3.7 Jig design reference (interference region) 3-8

4. ENVIRONMENT, TRANSFER, AND INSTALLATION 4-1
   - 4.1 Working environment 4-1
     - (1) Place of installation 4-1
     - (2) Power supply 4-1
   - 4.2 Lifting of machine 4-1
     - Fig.4.1 Machining center transfer work 4-2
   - 4.3 Installation 4-3,4
     - Fig.4.2 Connecting point of air-source 4-5

5. INSPECTION BEFORE TEST RUN 5-1

6. OPERATION 6-1
6.1 Function of operating parts ..... 6-1 to 7
Fig.6.1 Operator's panel 6-8
6.2 Preparation for operation 6-9
6.3 Manual operation 6-9
6.4 MDI operation 6-9,10
6.5 ATC sequence 6-10,11
6.6 Automatic operation 6-12
6.7 Handle operation 6-12
6.8 Routine operation procedure 6-12,13
6.9 How to set tools in MG, and ATC operation 6-14
6.9.1 Attaching and detaching of tools 6-14
6.9.2 Preparation for tool registration 6-15
6.9.3 Tool registration 6-15,16
6.9.4 Tool offset 6-16
6.9.5 Setting direction of specify boring shift 6-17
Fig.6.4 Direction of Tool Edge 6-18
6.9.6 Restoration measures for POWER OFF and EMERGENCY STOP during ATC 6-18
6.9.7 PLC Interface Diagnosis 6-19
1) Display PLC-I/F screen. 6-19
2) Display of PLC device data 6-19
3) Device data 6-19,20
4) How to turn ALARM lamp (diagnosis F99=1) off 6-21
5) In case ATC cannot be returned to home position. 6-22

6.10 PLC switch 6-23
6.10.1 Display of PLC-SW screen 6-23
6.10.2 PLC-SW ON / OFF 6-23

7. INTERLOCK 7-1
7.1 Axis movement 7-1
7.2 Spindle orientation 7-1
7.3 ATC operation (M06) 7-1
7.4 Magazine index by T-command 7-1
7.5 Automatic operation 7-1

MAINTENANCE MANUAL

—TABLE OF CONTENTS—

PAGE

1. INTRODUCTION 1-1

1.1 Safety instructions 1-1
1.2 Periodic maintenance 1-1

2. CONFIGURATION 2-1

2.1 Configuration of MZN-320H-VCJ (α 1) 2-1
2.2 Layout of sensor, motor, and solenoid valve 2-2
2.3 Stroke setting of MZN-320H-VCJ (α 1) 2-3
2.4 Position switches 2-4

3. PERIODIC MAINTENANCE AND SERVICE 3-1

3.1 Daily maintenance and service 3-1
3.2 Monthly maintenance and service 3-1
3.3 Six - month maintenance and service 3-1
3.4 Greasing 3-2
Fig.3.1 Grease nipples 3-3
3.5 Replacing battery and battery unit ..... 3-4～3-9

4. HOW TO DISPLAY SETUP PARAMETER SCREEN 4-1

5. MAINTENANCE AND ADJUSTMENT OF SPINDLE 5-1

5.1 Adjustment of Spindle Orientation ..... 5-1～5-3

6. MAINTENANCE AND ADJUSTMENT OF FEED MECHANISM 6-1

6.1 Bolt tightening torque 6-1
6.2 Establish X - axis reference point ..... 6-2～6-5
6.3 Soft limit ..... 6-6～6-7

8. PROGRAMMING AND PROGRAM TRYOUT 8-1
8.1 Introduction 8-1
8.2 Setup before machining 8-1
8.3 Program 8-2,3
8.3.1 New program registration 8-2
8.3.2 MDI data registration in memory 8-2
8.3.3 Editing of program 8-3
8.3.4 Memory operation 8-3
8.4 Example of machining program 8-4
A. Example of program using tool length compensation and canned cycle 8-4,5
B. Example of program for cutter radius compensation 8-6,7
8.5 Basic program for Jig-changer 8-8
8.6 Basic program for others 8-9,10

9. COOLANT UNIT (OPTIONAL) AND REMOVAL OF CHIPS 9-1
