Machine Ref: A1-GEK109
Description: Transilon Spiked Lattice High HYG
Manufacturer: German

General:

Especially for the production of hygiene products. Particularly easy to clean, resistant to chemicals and made exclusively from plastic and stainless steel components.

Available in blue or white.

Application

- Fibre preparation and fibre blending: bale openers, hopper feeders, bin blenders, mixing chambers
- For the original equipment of new machines
- For conversion of many machines on the market according to hygiene standards

Construction

- 2- or 3-ply PVC conveyor belt in sky blue or white
- Spiked laths made of PE natural or black
- Stainless steel needles and screws

Advantages

- Smooth and chemical resistant surface thereby small product adhesions and easy cleaning when changing batches
- Good sealability on the edges
- Longer maintenance intervals due to less contamination in the interior of the belt; no dirt entry from the drive into the product
- Flexible laths made of PE are almost unbreakable and shatterproof; to increase safety by means of optical foreign body detection also available in black
- Transilon in high contrast sky blue (~RAL5015) as a visual boundary in industry-standard audits as well as supporting the detection of belt abrasion in the product; also available in white colour on request, both Transilon belts are FDA-compliant
- Easy lath exchange with standard tools
