

Glassbuddy [80 & 150kg]

The Glassbuddy is a ground-breaking trolley that makes transporting glass panels and glazing units up to 80kg a one-man job or 150kg a two-man operation.

Glass units can be rotated 360°, tilted 20° and hoisted up to a height of over 3 metres (top of glass).

Glass units can be easily moved through a narrow doorway thanks to the adjustable width (700-900mm) and handy sideshift function that allows glass to be swiveled sideways. Two robust vacuum cups ensure glass is safely held in position.

The front wheels of the Glassbuddy slide back so the glass can be lowered all the way to the ground. The steering arm is adjustable in 3 positions and includes soft-grip handles.

Key Features

- Capacity: 80kg (1 man operation)
150kg (2 man operation)
- Easy to transport
- Large pneumatic wheels for working on rough terrain
- Distance between wheels can be adjusted from 700mm to 900mm
- Two 250mm diameter vacuum suction cups
- Weight: 45kg

Reference Code

AGT101

Dismantles for easy transport

Extension arm available for lower glazing work and glass balustrading.
Vacuum cups are 500mm (20") from the ground.
