

FOR RA

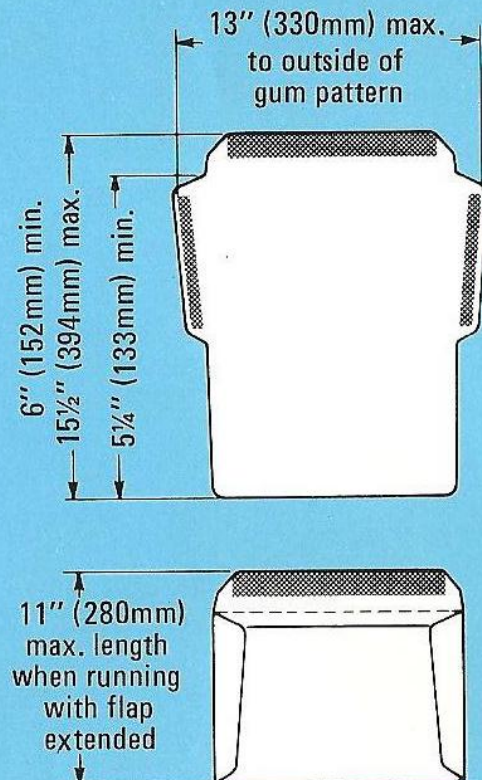

DOSS

DOUBLE OUTSIDE SIDE SEAM MECHANISM

The Double Outside Side Seam Mechanism DOSS replaces the standard RA seal fold and delivery units. It is an optional device which provides capacity for outside side seam envelopes as well as other special styles. While adding to the versatility of the RA, it places no limitation on speed or on the wide range of sizes and styles which the RA handles as standard.

The DOSS includes a special folding station for the outside side flaps, a seal flap folding station, and delivery to the work table. It is a special order for new machines and can also be installed in the field.

RANGE OF ENVELOPES

OPEN END ATTACHMENT FOR RA

OE

Open end envelopes, ranging from 3 1/2" wide x 6" long (89mm x 152mm) to 7 1/4" wide x 10" long (184mm x 254mm), can be manufactured on the RA. The OE Attachment utilizes timed seal gum gearing for proper drier chain spacing. The standard patch gumbox is used to apply seal gumming. Changeover from open end back to standard production is quick and simple.
