

**G**ood things come in small packages. And the Beloit Dynamic Washer™ is a perfect example. This revolutionary little machine removes up to 95% of contaminants with just one washing stage—compared to about 70% with typical drum or nip-type washers.

This compact Dynamic Washer is the ideal system for today's deinking plants. And it's only available from Beloit.

### Space-saving size.

The Dynamic Washer comes in sizes as small as 70" long x 36" wide x 40" high. So it's the perfect solution for plants with limited floor area. But with this system, you don't have to sacrifice performance to save space. So the Dynamic Washer is also a smart choice for new facilities with more room.

### Long-lasting filter.

One key to this efficient design is our unique finely perforated filter

which removes a wide variety of inks, fillers and other fine debris up to 50 microns in size. This filter gives you two to three years of trouble-free performance, compared

to competitor's filters which can wear out in three to four months. That saves you money and reduces costly downtime.

### Proven performance.

These new Dynamic Washers are already prov-

is no small wonder.**

ing themselves in the field. And the results are impressive. Customers report removal efficiencies approaching the theoretical maximum of 95%.

### Wide range of applications.

With its unique filter, the Dynamic Washer can also be used as a scalper to reclaim usable fiber from existing washing systems. Field results show that the system can recover up to 90% of fiber retained on a 100-mesh screen. With these savings, a Dynamic Washer used as a fiber scalper can pay for itself in less than a year.

### Contact your Beloit representative.

If you'd like more details on the little machine that's making a big splash, ask your Beloit representative about the new Dynamic Washer. It's no small wonder.
