Boxing Machine

HELIOS 593

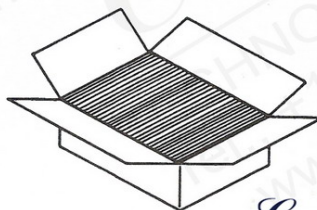

This boxing unit for attachment to W+D high-speed envelope machines will be an indispensable aid in the modern envelope industry, playing a major role in making the working environment for the operators of the ever faster running machines more pleasant.

It relieves the physical problems encountered by the operators when packing the finished envelopes without hurry and leaves enough time for that all important quality control. After the boxing process the envelopes lie with the seal flap fold up in the box so that the quality of the product can be seen at a glance.

The machine can be delivered as one of two versions dependent upon the boxes one intends using (see technical data).

Box types:

Version 1

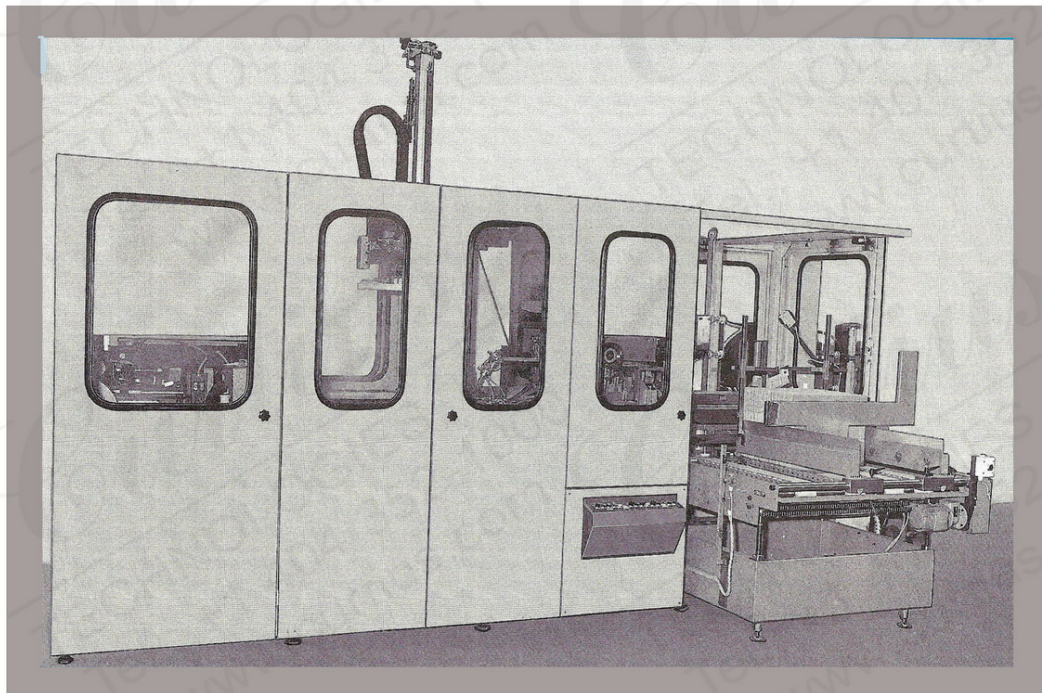

Curtius

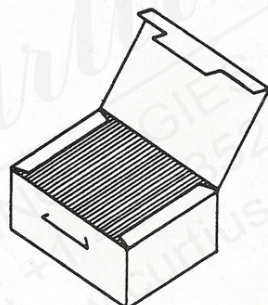

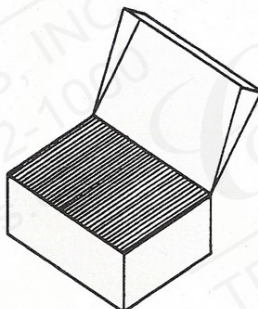

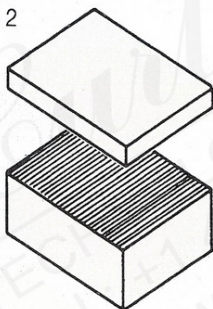

Boxing Machine

HELIOS 593
