

CARDIOTECH GT-50

Resting ECG Machine

USB Support

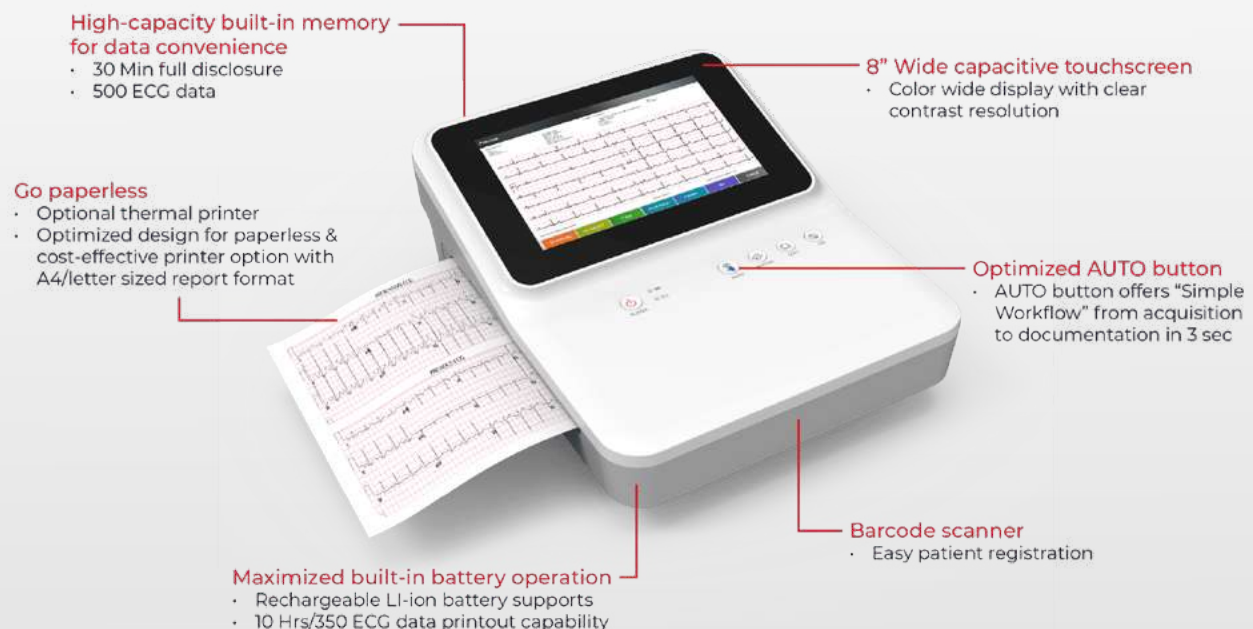

8"
Touchscreen

Built-in
Thermal Printer

Optimized Connectivity

The CardioTech GT-50 ECG machine is designed to optimize clinical workflows with a comprehensive suite of connectivity options, including a LAN port for secure, HIPAA-compliant data transmission. It delivers advanced and accurate interpretations with speed and precision, empowering clinicians to make more informed decisions. Additionally, the GT-50 supports optional spirometry, enabling combined storage of ECG and spirometry test results—further enhancing efficiency and convenience in multi-test environments.

Features

- Advanced spirometry test mode
- Save user profiles and seamlessly transfer them across compatible devices.
- Combine ECG and spirometry results per patient for effective data management
- External USB storage in multiple formats including PDF, XML, MFER, BMP, JPG, and DICOM
- LAN and wireless LAN support with HIPAA-compliant data transmission for secure network integration
- HDMI connectivity to external monitors, allowing for a larger, clearer display during testing and analysis.
