Features

The Hill HA90P Hill Adjustable Podiatry Model is designed with several features usually associated with far more expensive podiatry chairs. Powered by electric actuators, the Hill HA90P has three distinct adjustable motions: adjustable height provides a comfortable 24" to 37" working range for you while removing barriers for your patients; a recline feature tilts the entire chair to any desired angle while the electric tilt back completely lowers to convert the HA90P to a flat table. Special features include a pull-out foot section for taller patients; a removable, adjustable-angle, stainless steel pan; an adjustable headpiece for patient comfort; and fold-down armrests.
