

Technologies Manual

ROBOFIL 240SL•440SL

IMPRESSUM

This document was conceived and written by J-M. Depraz, CTSA-Geneva.

Technical data originate from our Wire product line, managed by, J. Drouet CTSA-Geneva.

Typesetting and production by
Edipresse Imprimeries Réunies Lausanne s.a./Renens

Printed by Edipresse Imprimeries Réunies Lausanne s.a./Renens

1. Presentation of technologies

2. Information on technologies and machining

3. Technologies for Steel

4. Technologies for Copper

5. Technologies for Hard Metal

6. Technologies for Aluminium

7. Technologies for Graphit

8. Technologies for PCD

Table of contents

Presentation of technologies	1.1
- Structure of the manual	1.3
- Settings	1.4
- Sequences	1.6
- Conditions for obtaining technological results	1.8
- Overall view of technologies available	1.10
 Information on technologies and machining	 2.1
- Calibration for cylindrical machining	2.3
- Recommendations for taper machining (angle > 8° - without Taper Expert option)	2.5
- Parts of variable height	2.17
- Special precaution for use of wire of $\varnothing \leq 0.15$ mm	2.17
- Recommendations for machining hard metal and PCD	2.18
- Configuration of flushing nozzles	2.19
- Special case of technologies SR25A and SR25V for taper machining	2.22
 Technologies for Steel	 3.1
Technologies for Copper	4.1
Technologies for Hard metal	5.1
Technologies for Aluminium	6.1
Technologies for Graphit	7.1
Technologies for PCD	8.1
