

Ultimate Control, Comfort and Safety

The large cab on the loader unit allows full movement and comfort for the operator, as well as complete control of the grinder while loading. State-of-the-art joystick controls are incorporated with a fully adjustable, lumbar supported seat for maximum comfort. The front windshield, designed for high visibility, is 1/2" Lexan and backed by two steel bars for operator safety. Air conditioning is included as a standard feature.

Clutch Protection

Our exclusive fluid coupler provides maximum clutch protection. If a jam occurs--even during start up--the engine throttles down and declutches before damage is sustained. This added protection also dramatically reduces clutch wear and virtually eliminates the possibility of clutch failures.

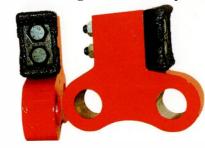

The ProCommand™ optional radio remote control is capable of operating the ProGrind 5100 at distances up to 500 feet away. It can be easily installed in the field in minutes.

Superior Grinding Performance

With one of the most aggressive hammermills in the industry, the ProGrind 5100 can cut through mountains of green waste at pro-

duction rates of up to 90 tonsper-hour. Toro's special double-bolt hammer tips provide more durability and grinding ease, assuring high production rates, less wear on the hammermill and easy maintenance.

To learn more about the ProGrind 5100 and the full line of ProGrind tub grinders, contact your local Toro Distributor, or call Toro at:

(800) 525-0059

The ProGrind 5100 conveyor and grapple fold for transport, allowing quick and easy movement of the grinder from job site to job site.

The ProGrind 5100 offers superior grinding power incorporated with an expert design that delivers the high-production output needed to complete big jobs.

A variety of grapples, including continuous rotation, are available for different applications and materials.

Triple 12" discharge augers provide the needed movement of material from mill area to stacking conveyor for this high production unit.

The tub and table tilt 90 degrees for emptying and easy servicing of the hammermill.

A protective canopy provides safety for operators by guarding against falling objects.

Conveniently located and easy to understand, the control panel provides maximum operational information to make grinding efficient, simple and safe.

Advanced technologies make this smart machine the safest in the industry and easy to operate.
