

# 7000

The 7000 is a 2'-4" x 1'-4" jaw action crusher fitted with a hydraulically driven vibratory tray. The material to be processed is moved in a fast, constant linear action into the jaw. The speed of the feeder can be controlled from the operator's handset. Grizzly bars are fitted to separate the fines material from the material travelling in to the jaw. The feeder base is fitted with wear plates to cater for abrasive materials and can be replaced during maintenance periods. Instant hydraulic adjustable jaws allow output product sizes to range from 1¼" x 4¾".

Purchasing a 7000 for recycling demolition and construction waste is a cost-efficient method of avoiding large landfill costs, onsite recycling and reducing demolition rubble to a useable product.

By adding a magnet conveyor to this crusher there is the added benefit of removing the steel found in your rubble but also recycling this "waste" steel to the scrap yards for additional financial value gain.

The wireless remote-control system means safe operation of the crusher on the safety of an excavator or loading shovel cab.

## STANDARD FEATURES

Jaw aperture | 2'-4" x 1'-4"

Average product size | 1¼" x 4¾"

Wireless remote control system

Cat 2.2 T4F/SV Diesel engine 55KW 74HP

Grizzly Feeder

## DIMENSIONS

Length Operating 28'-4"

Length Transport 24'-8"

Width 7'-6"

Loading Height 8'-8"

Weight 26,677 lbs approx.
