THE NEW

TROMMEL

THE NEW

TROMMEL

This fully mobile machine is designed to deal with the most complete range of material from wood chips to heavy contaminated soil and C&D waste. Its construction is of the heaviest duty while its positive drive without chains overcomes the problems, which continues to dog conventional trommels. Very high throughput even in difficult material. The following are among the features which set it apart:

- | Feeder automatically meters material into screening drum thereby maintaining the efficiency of the screening operation.
- | Screening drum is angled independently of chassis thereby ensuring the stability of the machine.
- | Direct transmission to screening drum without chains.
- | Feed boots and discharge conveyors designed to eliminate spillage.
- | Side doors open and close to facilitate service and mesh changing.
