

FROM THE GROUND UP!

Tuff Tank – Above-Ground Plastic Effluent Storage Tank

**Tough,
lightweight
& flexible.**

Tough on waste, easy on site

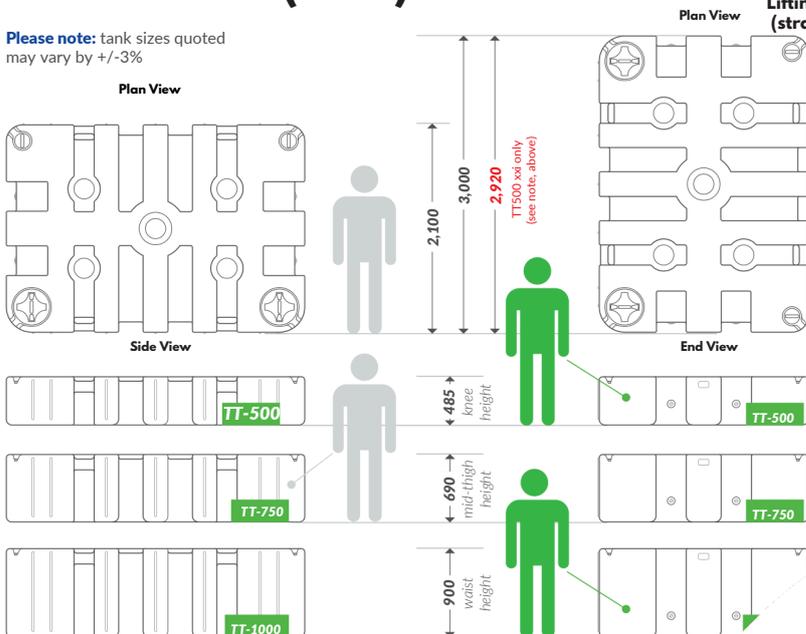

The Tuff Tank is a low-profile, flat plastic storage tank designed to hold liquid waste, including wastewater from toilets, showers, and sinks, as well as sewage and effluent. It is intended for use in off-grid or temporary settings where connection to a mains sewer system is not available.

These tanks are commonly deployed on construction sites, campsites, glamping locations, and at outdoor events. Installed above ground and offered in three capacity options, they are emptied when full by a licensed third-party waste collection contractor.

Dimensions (mm)

Please note: tank sizes quoted may vary by +/-3%

Technical Advantages

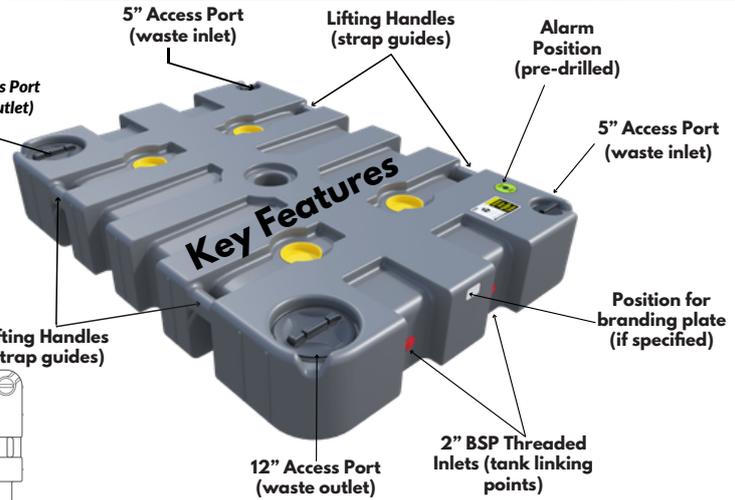

- Integrated lifting handles and dedicated sling points for safe handling and positioning
- Fixed, unique serial number for full traceability
- Permanent in-mould graphics displaying operating instructions and safety warnings
- Sloped, ribbed upper surfaces designed to shed rainwater
- Sealed access ports to minimise the risk of spills and control odours
- Expandable capacity by interlinking multiple tanks to extend intervals between pump-outs
- Configurable in two orientations: side-by-side or end-to-end
- Corrosion-resistant, hygienic construction with durable, flexible performance

Applications

- Construction sites
- Outdoor events
- Campsites and glamping sites
- Pleasure boat toilet waste tipping points
